

BL40B2: Small-Angle X-ray Scattering (SAXS)

Naoto Yagi
Yoshiteru Yamada

1. Learning what is SAXS ...and WAXS

Non-crystalline diffraction ... what is diffraction? what is scattering?
Hierarchy in non-crystalline materials
Pitfalls in SAXS

2. Visiting three beamlines: BL40XU, BL40B2, BL45XU

These three SAXS beamlines in SPring-8 have different x-ray sources and optics. To have an actual look at these beamlines is a valuable experience.

BL40XU:

http://www.spring8.or.jp/wkg/BL40XU/instrument/lang-en/INS-0000000353/instrument_summary_view

BL40B2:

http://www.spring8.or.jp/wkg/BL40B2/instrument/lang-en/INS-0000001280/instrument_summary_view

BL45XU:

http://www.spring8.or.jp/wkg/BL45XU/instrument/lang-en/INS-0000000334/instrument_summary_view

3. Understanding optics for SAXS

Using the above three beamlines as examples, designs of SAXS beamlines are explained.

BL40XU: helical undulator --- double focusing mirrors

BL40B2: bending magnet --- double crystal monochromator --- bent cylindrical mirror

BL45XU: tandem vertical undulators --- double crystal diamond monochromator --- double focusing mirrors

Other beamlines: BL20XU and beamlines in other facilities.

4. Understanding detectors for SAXS

Several different types of detectors are used at the above three beamlines. Apart from basic detectors such as ion chambers, they are all area detectors.

RAXIS: image plate detector

X-ray image intensifier + CCD camera: high sensitivity and fast readout

CMOS flatpanel: solid-state area imager

Platus: photon-counting pixel detector

5. Protein solution scattering measurements at BL40B2

Data acquisition using samples such as calmodulin.

6. Practicing data analysis

Introduction to widely used SAXS data processing software (fit2D, PRIMUS, etc.)
